On her journey of growth, Celeste goes from comparing herself with others and doubting herself to realizing that she has many strengths that others don't. The influence of external environments on children is significant, affecting how they perceive themselves and shaping their core beliefs about life. This includes how they face the challenges and difficulties of different developmental stages and their belief in their own abilities. This entire chain of growth relationships depends on the child's level of self-identification. Especially in today's society, where a culture of comparison has permeated all age groups, the resulting psychological consequences, such as anxiety and lack of confidence, are often imperceptible. The attitude of parents - the primary caregivers of children - plays a big part in shaping children's self-identity. Creating a positive, supportive environment for children, therefore, is key to shaping children's self-identity.	3-10 years old	Cantonese
